Inspection of Schools.

D UMORS of dangerous structural defects in Washington schoolhouses are heard every now and then.

Most of these, probably, are unfounded. There will be an element of hysteria among District people for some time to come when the question of building security is under discussion.

But two or three of these rumors may have a basis in fact. Is anyone sure? Is it within the limits of possibility that the roof of one of these buldings will crumble some day, without warning, crushing out the lives of those underneath?

There is no better time than the present to find out. Every schoolhouse in the District should be subjected to such a rigid building inspection that it would be impossible for any flaws to remain hidden. This inspection should be conducted by the best experts procurable.

Whenever the slightest doubt was felt, there should be no alternative to ordering at once such repairs as would place the building a long way beyond the margin of safety

With the assurance that this had been done, Washington patents would spend happier days while their children were at school. A number of rooms in one of the District high

schools were closed Tuesday because of large cracks which appeared in the plaster around one of the supporting beams. Dr. Stephen E. Kramer. assistant superintendent of schools decided after examination that this constituted sufficient indication of danger to warrant ordering the rooms vacated until repairs were completed.

But if the defect is there, these rooms have been as dangerous during the past few weeks as they were at the moment when the cracks became visible. Ceilings often crack. There may be no danger after all. But why await a warning visible to the eye or ear of the layman when experts could probe behind the ribs of lathing and tell us at once.

Exceedingly unsafe conditions were found in a dozen District theaters when a rigid inspection was made. Yet to the average man or woman there was nothing apparent to indicate this danger. If the Knickerbocker had not collapsed there would have been no investigation of the other buildings-and the public would have gone on supremely unconscious of its insecurity.

Why wait longer to ascertain the actual condition of the school buildings? We have the opportunity and the incentive to start with a clean slate. Do the few dollars of additional expense count against the possibility, remote though it may be, crushed-out child lives?

The telephone company, in order to acquaint subscribers with the proper use of the instrument is displaying miniature switchboards at various civic affairs. Those who have watched the demonstrations are at a loss to know where central gets time to give all the wrong numbers.

In Five Years.

YESTERDAY was the fifth anniversary of America's declaration of war against Ger-

It has been an eventful half decade. In some way or another that proclamation of Woodrow Wilson's, placing the United States in the ranks of the allies, has had its effect on the lives of every one

The most noticeable change has been, perhaps, that the provincial era in our history is over. Americans no longer are villagers, to any great

The war made us, for the first time, really acquainted with each other. Precipitation of men from every province into the military melting pot was most instrumental in bringing about this change. Furthermore, we became men of the world. Two millions overseas had a good deal to do with this. And, of course, where the men were, there mothers, sisters and wives were also, in spirit. So the great idea permeated through the whole mass.

War conditions placed many of those who remained outside military activities on a plane of luxury such as they had never before imagined. Fortunes came to poor men overnight. It was inevitable that the people should be gilded, for a time, with that culture which comes with money.

The war brought to us the new order. It will require more than a temporary depression such as we now experience to plunge 105,000,000 people back into the old order.

It sometimes seems as if the United States, and one or two of the British dominions, alone came from the war victorious-with something definite gained. These gained a contact universal with the

As for the others-France, England, Belgium Italy-they lost almost as surely as the central powers. The cost of what they secured was so heavy that they cannot bear the burden.

One-Man Street Cars.

WHATEVER ultimate solutions District street railway companies may find for their trouhles, the one-man car is not one of them. It is a etep in the wrong direction. As yet not many have een put into use in the city. They should stop

right where they have started. The economy that would justify their use must needs be great indeed -far greater than the saving in the pay of one

FRIDAY MORNING-

The one-man cars are slow, uncomfortable and dangerous. Those who are forced to travel in this fashion must endure discomforts enough, even in the most spacious, best-designed cars. When these discomforts are doubled by an alleged labor-saving device, patrons have the right to register the most vigorous protests. District citizens' associations are taking a step in the right direction for the people of their own neighborhoods. At nearly every meeting in the last two weeks resolutions have been adopted protesting against the continued use of these cars.

Unfortunately, resolutions, like babies, are born toothless. Traction companies are not afraid of toothless creatures and probably will continue to operate these cars until some more forcible action

To watch a long line of men, women and children trying to jostle their way through a narrow entrance, crowded, pushed this way and that, is a sorry spectacle. It illustrates the depths to which a once great transportation industry has fallen. The comfort of street railway patrons has decreased steadily during the past few years. Some say the street railway is becoming rapidly

a thing of the past. There is nothing which adequately replaces it yet. And while we must endure it, the public owes it to itself to let the companies know its patience is nearing the breaking point.

Representative Blanton, of Texas, may run for the United States Senate. This should put him in a class with W. J. Bryan, Sir Thomas Lipton and the Washington Baseball Club.

Admiral Peary.

MERICA will have fallen on evil days when hero worship dies in the hearts of her people. But fortunately we have the invaluable inherit ance of many heroes whose glory was not won on the battlefield or the smoke-swept deck-men whose names stand out in the annals of peace and progress, of science and discovery. Of all these men Admiral Robert E. Peary,

discoverer of the North Pole, has one of the most fascinating and inspiring life stories. The dedication of a monument to his memory in the nation's shrine of heroes, Arlington, yesterday, must needs bring back for a moment most vivid memories of the feats he accomplished Admiral Peary secured for the United States

the foremost place among modern nations in the field of exploration. His discovery of the Pole came at the end of such a long list of failures by expeditions from other nations that the task was considered well-nigh impossible.

Most essentially, Peary did not succeed where others failed through any trick of fortune. Few North Pole expeditions encountered more constant 'hard luck." Pure American grit carried him ahead from the point where others, discouraged, turned back. And at the end of the most glorious exploit in modern exploration he returned to find himself nearly robbed of the credit through the claims of another.

The call of the Northland ever has been strong in the breasts of the adventurous. The most daring sailors of all times have ventured into the untracked ice and the long darkness. There was little material reward. In the great waste, they knew, no vast treasure continents, no mountains of diamonds or hills of radium, awaited a discoverer.

The scientific value of their discoveries without doubt was great. Its worth hardly yet is appreciated. But it was not a sufficient attraction to tempt men to face the tremendous odds in favor of death in the stormy night country.

The trackers of the Arctic, Peary among them, were tempted especially by the glamor of the adventure and they asked nothing at the end-not even a ribbon to stick on their coats.

Surely as high a place in the hearts of Americans must be held by Admiral Peary as by any of the nation's great war admirals.

Worried Teachers.

LOWER standard of education in the District A of Columbia is unthinkable.

Yet, according to Dr. Frank W. Ballou, superintendent of schools, this is the one alternative to higher salaries for Washington school teachers.

On school questions Dr. Ballou, of all men in this city, should know whereof he speaks. To him the teachers bring their pleas. To him they present the statistics of other cities. And his position makes him intimately acquainted with some of the inconveniences under which they must work, re gardless of pay. Educational standards of the District are in-

tended to be the educational standards of the nation. Any tendency to fall away here is certain to be reflected throughout the United States. Washington schools have drifted for some time. Surely every member of the House and every Senator realizes that now is the most opportune time to stop this drift.

The situation has been placed squarely before Congress. Parsimony in this respect would be the most serious mistake the Senate District Committee could make in its dealings with this city.

Permission to do outside work to increase their ncome is granted District teachers only in exceptional circumstances. Yet we learn from Dr. Ballou that it has been necessary to grant ninetyfour such permits. Otherwise the teachers would not be able to meet living costs. Such work detracts seriously from their efficiency as teachers. The District's most precious possession, its children, suffer the consequences.

Worried men and women cannot have the magnetism of personality which is required of the successful teacher. Despite their own best intention, they become irritable and impatient. Inability to make ends meet is a most serious cause for worry. It is up to Congress to see that no such cause

WORLD SET BACK

"Yes, the war has set the world back half a century," says Dr. Robert S. Woodward, who recently resigned as president of the Carnegie Institute in Washington.

"The wormen have gone crazy over the luxuries which the high wages brought them. The essential "Tis leap year stranger."

wages brought them. The essential virtues practiced by our forefathers who built this great country—indus-try, thrift and fidelity—have been almost destroyed. Neither you nor I will live to see the regeneration.

After the civil war it took search. and a greater appreciation of thirty years; now it will take much longer. "Nations rise and fall, but the "Nations rise and fall, but the progress goes on. For instance, this war, which has wrought such tremendous havoc abroad, has produced an enormous stimulation in all scientific research. People have got to At midnight hour the knot was tied.

greater, so even

DR. WOODWARD generation of the caliber of em-ployes. While the wages during the last six years have mounted steadily, the quality of work given for the high prices has with equal regu-larity declined.

"That is why I say the old-fash-"That is why I say the old-tash-ioned virtues are being destroyed— not completely destroyed, however, for on the whole I believe in the progress of the human race, the sacrifice of the individual to the race, if necessary. All through the history of the world progress has gone in cycles, or, we might say, in pendulum-like waves of calm and atress. We're on the wrong side of the storm center now, but with its next swirl it will carry men a liftle higher along the path. I believe that thoroughly. In 1950, perhaps, or 1980, we shall once more be on And butter in the cotton belt like rain the upper trend-that is, those who after us—the next generation ut we have many obstacles in the way of progress and civiliza-tion. Superstitions that everyone has are extremely hard to batter down in the fight for progress. They die hard even in a race which believes it is civilized. Not so long ago the newspapers, related how a multitude of men, women and children, many of them suffering from loathsome, contagious diseases, gathered to kiss it had peculiar properties that would stition against scientific knowledge. No less hard a death was that of the idea of a flat, four-cornered globe. Who would believe that as globe. Who would believe that as late as the latter part of the nine-teenth century this theory was ar-gued by intelligent men? "However, the epochs and episodes "However, the epochs and episodes

the estimate of scientific progress.

The average position of so-called civilized men is always behind the mean position obtained by scientists.

But I believe that the war has given impetus to science and that the fu-ture looks very bright. In the past century we have seen the extinction of the ravages of such dread diseases as typhus and yellow fever and a great mitigation of consumption and typhoid. It was necessity which cleared Havana of yellow fever and produced there extraordinary and effective health regulations. Those elements will be a successive the second of the s

Answers to Your Questions

This department is conducted by The Herald to quewer questions of its readers. All questions will be approved in these columns. Address letters to the Priend of the Papple.

BERT DIED IN DETROIT.

I would like to know the State and place where Bert Williams died. How old was he at the time of his death. I first saw him in the Follies. What were some of his other shows? G. L. M.

Bert Williams died in Detroit, Mich., March 12. 1922. His death was caused by pneumonia. Bert Williams was 48 when he died. At the time of his death he was playing "Under the Bamboo Tree." Some of his other shows were "Two Real Coons." "The Son of Ham." In 1911 he made a contract with the Ziegfeld Foilies and played in the Follies for ten years. EXTENT OF VOCABULARY.

Please advise me through your column as to the best method to be used to determine the extent of my vocabulary.

Open a large dictionary to any page, count the words with which you are familiar on this page. Repeat this several times opening the dictionary to any other fully printed page, and take an average of the number of words on any one page. Multiply the number of pages by the known words on any one page.

DARWIN WROTE IT. To the Friend of the People:

Kindly advise through your department who wrote the Descent of Man. J. O. H. "The Descent of Man and Sex Selection" was written by Charles Darwin.

BONUS NOT DECIDED ON.

To the Friend of the People:

I understand the State of Pennsylvania is going to pay a bonus to the men who fought in the late war from that State. If this is true please inform me through your column when it is going to be paid and to whom one should make application.

The State of Pennsylvania has adjourned its State senate for the year and will not meet until 1923. At the time of adjournment a State bonus had not been decided upon.

ALEXANDER GRAHAM BELL.

Can you tell me something about Alexander Graham Bell? Graham Bell?

Alexander Graham Bell, inventor of the first successful telephone, was born in Edinburgh. Scotland, in 1874. He was educated there and in London, and in 1876 went to Canada with his father, who was the inventor of the "visible speech" method of teaching deaf mutes to talk. Besides the telephone, Bell invented the photophone, the graphophone, the forerunner of the phonograph, and the telephone probe which detects bullets in the human body. Dr. Bell makes his home in this city.

About Civil Service.

To the Editor, The Washington Herald: Believing firmly in the great un-derlying principle of the Civil Ser-vice Commission, I do not think it

Communications will not be returned unless specific request for such return is made and stamps inclosed. Letters should be typewritten when over results. Communications extremeever possible. Communications extremely difficult to read will not be considered. Me communications signed with fictitious uames will be used.

errors that have crept in and are maintained to the grievous injury of the service. This government does not exist simply to serve as an employer; there are nobler aims. The sole reason for the existence of the Civil Service Commission is to aid the government by obtaining the best and most efficient class of employes possible to carry on the work of the various governmental departments. It is not its office to work to increase its own personnel or to add to the number of eligi-bles on the rolls, regardless of nonexistent vacancies. Accepting this view, how can we reconcile the holding of regular spring and fall examinations to secure eligibles for all grades, when the present registers contain the names of many per-sons who have taken the examina sons who have taken the examina-tion in good faith and are waiting to be certified? This too, when there are few vacancies and the "ax" is falling everywhere, separa-tions being made "for the good of the service"

FOR RUBBER INDUSTRY

Though the price of crude rubber suffered a phenomenal drop from \$2 a pound, the price due to the tremendous demand in 1910, to about 13 cents a pound, the selling price 1920. Dr. William C. Geer, director of the Chemical Laboratories of the B. F. Goodrich Company, in an address before the American Chemical Society at Birmingham, Ala., de-clared that the future of rubber is bright. All parts of the world, he said, will need improved transpor-tation facilities in the future and rubber will passessarily play as im-

rubber will necessarily play an im-portant part in this development. As crude plantation rubber costs from 18 to 25 cents a pound to pro-duce. Dr. Geer declared that any duce, Dr. Geer declared that any ideas as to new uses for rubber would now be welcomed by rubber manufacturers. But he pointed out that although about 10,000,000 of the 12,000,000 automobiles in the world are in the United States, the future would see improved highway development throughout the great continents of Asia and Africa and althing areas in consequents.

The world uses about 300,000 tons of crude rubber and seventy-five per cent of this comes to America. Dr. Geer said. Three-quarters of the American import is used in pneumatic tires, solid tires and inner tubes. During his address, Dr. Geer re-

During his address, Dr. Geer revealed for the first time that organic accelerators for hastening the interaction between sulphur and the rubber during vulcanization were first developed and used in America. "The laboratory record books of the Diamond Rubber Company, which was later consolidated with the B. F. Goodrich Company, show that George Oenslager, in the early months of 1906, experimented with anilin oil, and a long list of other organic compounds, with the definite purpose of hastening the time of vulcanization," he said. "In June of that year, A. H. Marks directed its use in factory formulas, and in February, 1907, he used thiocarbanicide. The German patents were not accept the said of the control of the con lide. The German patents were not published in this country until 1912.

canization originated with Mr. Uen-slaver and Mr. Marks in 1906."

The perfection of a test that ages rubber as much in a day as in sin-months under normal conditions was announced by Dr. Geer. "To determine over-cure and how rap-ldiv a new compound will age in idly a new compound will age in comparison with one of known properties. I devised a test some ten years ago by which the rate o decay could be predicted," he said.
"From this ten years' experience I now believe that in the heat of 70 ion, Walled in by crumbling barriers of degrees C. with plenty of air, one day in the 'short life oven' corre-sponds to about six months' natural
